Comparison between the new TRBA 250 requirements and features of the Aesculap safety scalpel

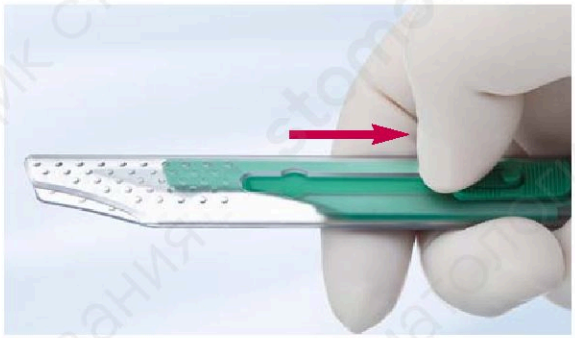

§ The safety mechanism is part of the system and compatible with other accessories

§ Single-handed activation must be possible

✓ **The mechanism is activated automatically by sliding back the blade with one hand**

§ The safety mechanism must prevent reuse

✓ **The blade is safely locked in the disposal position**

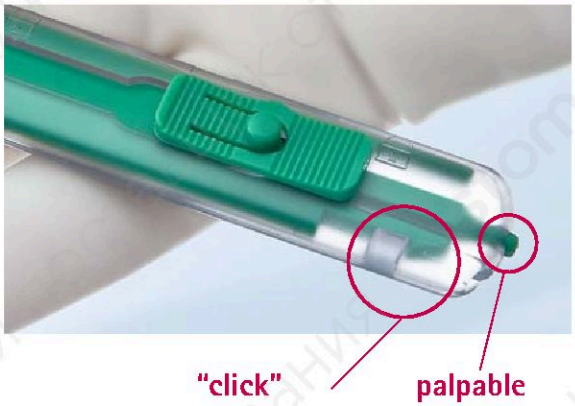

§ Using the safety product does not require a different technique of use.

✓ **It is used in the same way as a standard single-use scalpel**

§ The activation of the safety mechanism must be clearly indicated (palpable or audible)

✓ **An audible "click" indicates that the safety locking mechanism has been activated, and this can also be seen immediately**
