BV-650

Probe: 8MHz

Display: 5.6inch, TFT, (640*RGB*480)

Control mode: automatic cuff inflation/deflation and hand-held controller.

Printer: 80mm, printing width:70mm

Data storage and transmission:maximum store 100 patient' s data, transmission to computer via USB 2.0

Power supply:100-240VAC, 50-60Hz

Build-in battery:Ni-MH rechargeable batteries group, 12V 1800mAh

Doppler ultrasound exam of an arm or leg

This test uses ultrasound to look at the blood flow in the large arteries and veins in the arms and legs.

How the Test is Performed

The test is done in the ultrasound or radiology department or in a peripheral vascular lab.

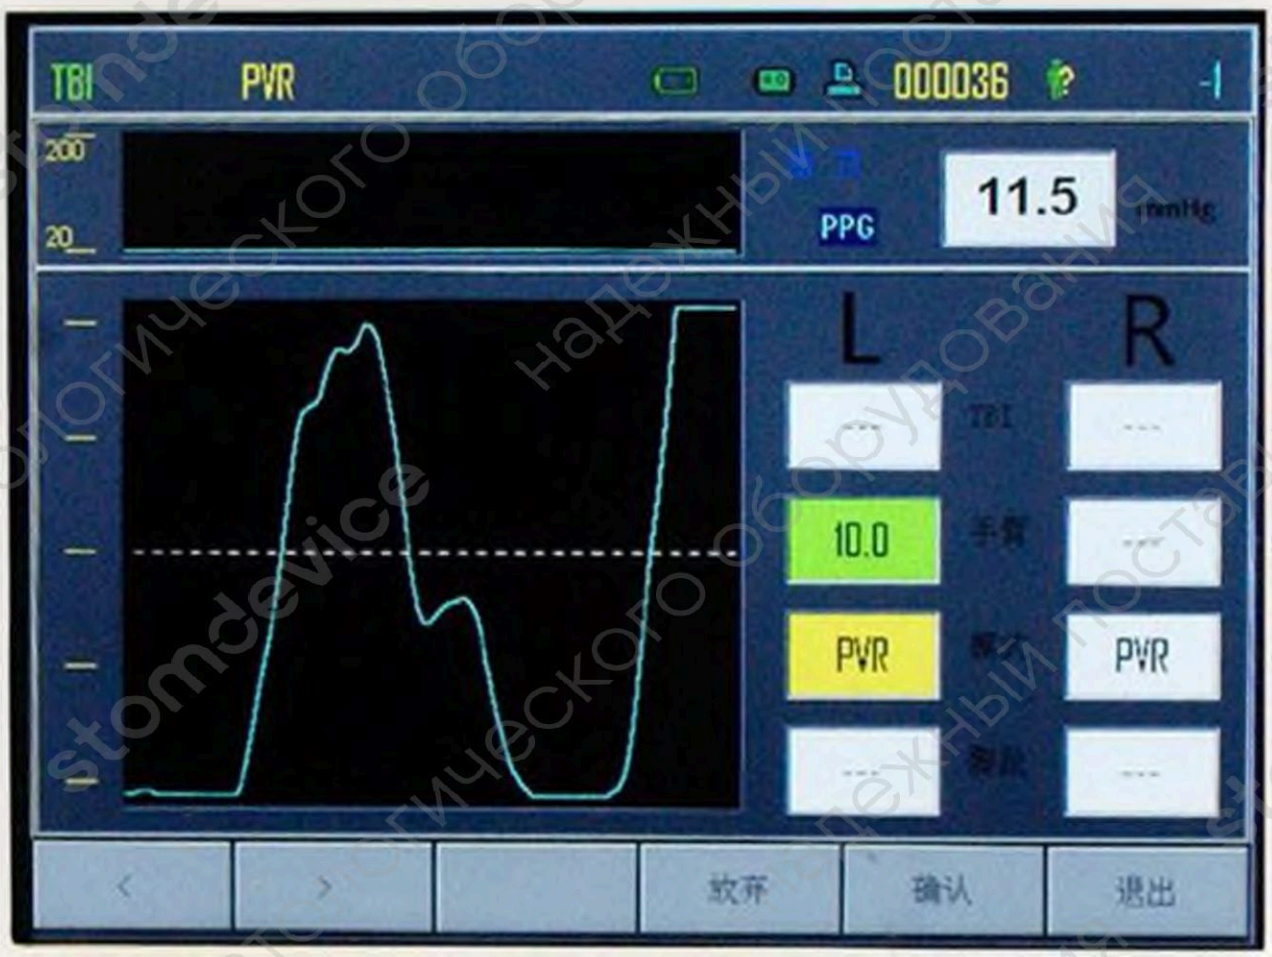

During the exam:

- A water-soluble gel is placed on a handheld device called a transducer. This device directs high-frequency sound waves to the artery or veins being tested.
- Blood pressure cuffs may be put around different parts of the body, including the thigh, calf, ankle, and different points along the arm.
- A paste is applied to the skin over the arteries being examined. Images are created as the transducer is moved over each area.
