

BREAST SELTHECKING INSTUMENT

The BVF-262 Breast Selfchecking instrument mainly uses near infared light of a Specific wavelength as a light source to penetrate the breast, Since diferent tissues absorb infrared light diferently, for example, abnormal tissue can preferentially absorb infrared light while the tissue in a good condition absorbs infrared light less , the height of the breast can be judged based on the similarities and di f ferences Of the images.

Product specification

PROJECT	
Product size (L*W*H)	201mm*38mm*50mm
Working Voltage	input : IG 100V-240 output : OC 12V
Working Current	2A
lithium battery Current	DC 7.4V
lithium battery Capacity	1 , IOOmAh
Radiant power	< 18W
Near-infrared wavelength	600~650nm±5%
Net weight	138.6±10g

Product Features

1 strong light source

real time self - check and clear Image
Non-invasive, no radiation, no heat generation

2 Compact arnd lightweight

Appearance design is more humanized
The picture is clearer
more comfortable to hold

3 easy to operate

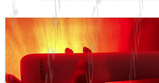

indutive touch switch,safe and save electricity

4 powerful performance

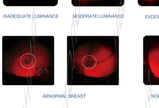

The images with high resolution and good repeatability can be compared before and after

product details

operating instructions

1). Press your finger on the side sensor (one of the left and right side is ok)With the back of the pattern sensor can be opened.

2). After starting up, the back pattern sensor can be long pressed to adjust the brightness (after adjusting to the appropriate brightness, the back pattern sensor can be loosened). At this time, the side sensor still needs to be pressed.Release the side sensor to shut down

Notes

1 *To prevent discomfort, keep your eyes away from the light source

2 Do not pour liquid into the instrument while cleaning

3 *Do not use under charging, single use time should not be too long
