ProMi

Adjustable Focus Intraoral Camera HDI-712B

Working Scheme:

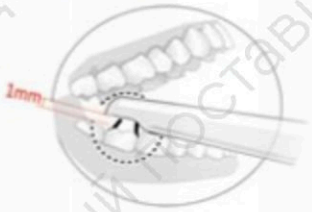

https://stomdevice.ru - стоматологическое и зуботехническое оборудование с доставкой по России и СНГ

stomdevice

1.High-definition image quality with the distortion less than 5% could display the odentoschim perfectly.

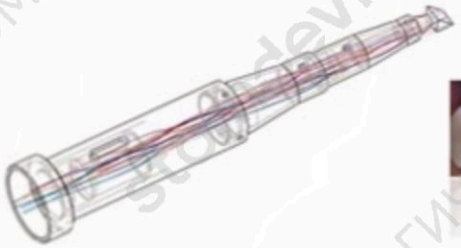

2.Zero distance photography makes it easier to obtain fantastic images of posterior teeth for the patients with restriction problem of mouth opening .

3.Imaging efficacy close to those from dental operating microscope, which could observe the results of root canal cleaning and the root canal orifice after odontotrypy.

4.Adjustable focus which works like DSLR could fulfill the different image requirements from root canal to whole face.

ProMi
