Your skills are worth LM™

Whether it comes to the design or the production of the LM-Dental™ instruments, we focus on the specific needs of the dental experts. We are in a constant communication with the end users of our products to keep our product development on the cutting edge. We are the innovation leader that others copy. Our radical product theses of the 1980s – a thicker handle, optimized shape, elastic surface, lightness and color coding – have become industry wide standards in the 21st century.

The ergonomics has been the guiding light of our product development since the establishment of the company. Based on new research we now know more than ever about ergonomic instrumentation. The result is LM-ErgoSense®, a future icon in dentistry. With contemporary coating technology we are able to add on additional features, that offer unique benefits for you and your patient. Sharpen free periodontal and non-stick restorative instruments are available for you to choose.

In addition to the new level of ergonomics, LM-ErgoSense® offers new opportunities with its built-in RFID technology, which together with scanning readers and software create a unique LM Dental Tracking System™.

You can feel the difference and so does your most satisfied patient.

The pioneer in INSTRUMENT ERGONOMICS

How to define the ergonomics of a hand instrument? Firstly a non-slip and natural grip on an instrument are essential. Secondly a lightweight and optimized design prevent effectively occupational diseases. Thirdly a good tactile sensitivity and easy handling of the instrument guarantee the best clinical results. Reliability, wear resistance and comfort are the features that will be evident for both, the dentist and the patient. These are the guiding principals how Pekka Kangasniemi, DDS, one of the founders of LM™, defined instrument ergonomics already in the 1980s.

Still today our aim in product development is to innovate together with the clinicians. Based on new research we now know more than ever about ergonomic instrumentation. The result is LM-ErgoSense®, which fits the hand perfectly, enables relaxed grip and offers ultimate tactile sensitivity.

Elastic, ergonimic surface material and optimal contouring
- comfortable and non-slip grip

Special alloyed metal core
- lightweight structure
- metal-to-metal connection for enchanced tactile sensitivity

Optimal rigidity
- excellent sensitivity and efficiency
- outstanding corrosion resistance

Precision formed tips and high-quality finishing
-extremely sharp and smooth cutting edge

To sharpen or not to sharpen?

That is the question, but in both cases LM™ periodontal instruments are ultimate in metallurgy. The high wear resistance and hardness of the blade metal makes them efficient, long-lasting and comfortable.

Resulting from the advanced material technical research and contemporary micro coating technology LM™ can offer the highest quality in both uncoated and coated product categories.

- The micro coated LM Sharp Diamond™ instruments are completely sharpen free and razor sharp.
- If you wish to resharpen the uncoated LM-DuraGradeMAX® supersteel offers you the ultimate wear resistance.

According to independent research studies, the wear resistance of LM™ curettes is significantly better than that of the comparative instruments. The choice is yours.

UNCOATED

LMDuraGradeMax®

- High wear resistance
- Immune to corrosion
- Can be resharpened

High-tech production technology

Like every true professional we also aim for the ultimate perfection in our work. LM-Dental™ devotes its entire product development and production process to achieve the best possible quality in all our products for you to have the very best tools to work with. We deliver the highest of quality to guarantee your success in the treatment results. All our products are produced in Finland.

Enjoy sharpen free prophy and perio

Opposites attract. This holds true with high-quality, periodontal instruments. Optimally they are razor sharp, extremely hard, yet smooth and light. A new micro membrane coating made using modern Physical Vapor Deposition (PVD) technology enables LM™ to create LM Sharp Diamond™ instruments with the optimum combination of these features. LM Sharp Diamonds™ are completely sharpen free, tough but refined, offering unique benefits for you and your patient.

"It's great that I don't need to waste my time on sharpening any longer! Since the LM Sharp Diamond™ instruments are totally sharpen free, I can concentrate on the clinical work. Even my patients have noticed how these instruments feel more comfortable and are quieter. I can remove calculus with controlled strokes using extremely light grip. The long-lasting sharpness really makes a difference!"

LM-ErgoSense® instrument handle

UNIQUE COMBINATION OF SENSATIONAL ERGONOMICS AND NEW RFID TECHNOLOGY

Today the focus is on ergonomics – without losing sight of efficiency. The LM-ErgoSense® hand instrument meets both of these requirements and is truly a unique combination of ergonomic design and integrated new RFID technology. It is the outcome of intense research and product development in close cooperation with dental clinicians and professionals. An ergonomic, high quality hand instrument naturally feels good in the hand. Even genuinely sensational as the smart LM-ErgoSense® has been described.

Rated as the best hand instrument

The value of a truly ergonomic instrument grip can never be emphasized enough as revealed in several scientific studies. A hand instrument with thick silicone handle has been found to be more usable, cause lower perceived strain and to be more productive than those with thinner handles (1). LM-ErgoSense® was rated as the best in ten out of fourteen specified usability features compared with the other tested instruments in a dental scaling simulation (1). It was also ranked as the best instrument.

Most participants in the authentic scaling part of the study considered the LM-ErgoSense® silicone handle as their favorite due to the enhanced grip, comfort and instrument's functional design. The participants' evaluations were based on their active use of the LM-ErgoSense® in authentic clinical work. In another study focusing on ergonomics, usability characteristics and work productivity using different manufacturers' hand instruments the thick, silicone coated LM hand instruments were the most preferred choice in regard to all 18 usability criteria used in the test (2).

"Feels great in the hand."

Choosing the handle

Choosing the most ergonomic hand instrument can make a big difference in terms of discomforts and disorders when performing dental work. It is by no means insignificant what the diameter of the hand instrument's handle is or what the material of the grip surface is. When holding the instruments for approximately 2,000 hours each year, the design, weight and feel of the instrument are crucial for the dental practitioner in terms of his/her performance and productivity.

LM™ instruments are available with a selection of different handles. All exceptionally ergonomic due to the elastic silicone coating and optimized contouring. The clinician's hand fit and indication both play a role in selecting an ideal handle type. Interchanging different handles, may place the user's hand under even less strain.

Colors, naming and coding

To facilitate color coding and brighten up working practices all the LM™ instruments come in refreshing colors. The name and the code number on the handle ease the identification of the instrument during clinical procedures and maintenance.

Handle selection

LMErgoSense®

The larger diameter and design provide sensational grip that has been proven to be ergonomic and efficient in scientific clinical testing.

LM-ErgoSense® handle is available with integrated LM DTS™ RFID tag. The compatibility with the LM Dental Tracking System™ offers many opportunities to improve asset management and patient safety.

SICKLE SCALERS

MD CE

For the removal of supragingival calculus.

Instrumentation:

For calculus removal place the tip third of the scaler's cutting edge against the tooth. Tilt the instrument toward the tooth to achieve 70° to 80° angle between the tooth and the blade. Apply lateral pressure and activate the scaler by using vertical, diagonal or horizontal pull strokes. To maintain control use short 2-3 mm long strokes.

Design:

- Triangular cross section
- Face perpendicular to the lower shank
- Two cutting edges (red line)
- Pointed tip

UNIVERSAL CURETTES

MD CE

Designed for the removal of moderate and heavy calculus from all supra- and subgingival tooth surfaces.

Instrumentation:

For calculus removal place one of the cutting edges of the universal curette against the tooth surface. Tilt the instrument toward the tooth to achieve 70° to 80° angle between the tooth and the blade. Apply lateral pressure and activate the curette by using vertical, diagonal or horizontal pull strokes. Both cutting edges of the same curette can be used by simply tilting the instrument one way or the other.

Design:

- Working end perpendicular to the lower shank
- Two cutting edges (red line)
- Rounded tip

DUAL GRACEYS MD CE

LM Dual Gracey™ combines the benefits of a universal curette and a Gracey curette in one. These instruments are designed for the removal of supra and subgingival calculus from all tooth surfaces.

Each LM Dual Gracey™ tip has two elliptical cutting edges - a mesial and a distal edge. This desing allows for treatment both mesial and distal tooth surfaces. LM Dual Graceys™ are suitable for vertical, horizontal and oblique scaling techniques.

Introduction video for use of LM Dual Gracey™ instruments

Design:

- Two elliptical cutting edges
- Rounded tip

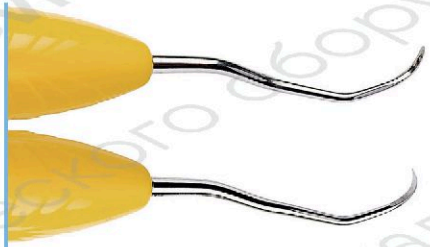

LM™ INNOVATION

LMSyntette™, the Story of ORIGINAL Dual Gracey

In the late '70s Swedish dentist Leif Ericsson, the head of the Perio Department in Västervik Hospital in Sweden, was challenged by the complexity and number of instruments used during periodontal treatments. *Couldn't there be an easier choice and more versatile instument?*, he thought.

Ericsson analyzed the design and function of the two most popular Graceys - 11/12 and 13/14 - and came up with the innovative idea: a synthesis of two curettes - a Syntette™!

A meeting on the train with founder of LM™, Finnish dentist Pekka Kangasniemi in '80s, restarted the discussions about the idea for a double-sided Gracey, and a truly universal instrument, the Syntette™ was conceived.

GRACEY CURETTES MD CE

Area specific curettes for the removal of deep subgingival calculus. For the finishing of subgingival root surfaces.

Design:

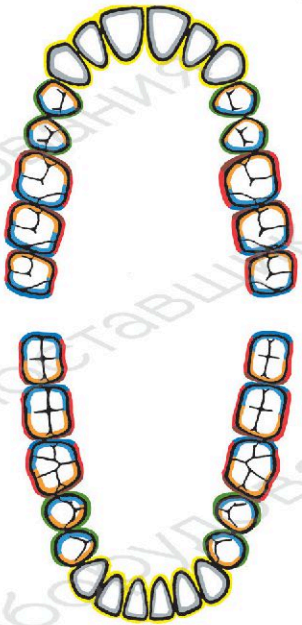

- Working surface inclined 20° to the lower shank
- One curved cutting edge (red line)
- Rounded cutting tip

Sharpening of LM-DuraGradeMAX® steel tips

Instrumentation:

Place the tip third or half of the cutting edge of a Gracey curette against the tooth surface. The larger outer curve is always the cutting edge. Make sure that the lower shank is parallel with the tooth surface. For calculus removal apply moderate and for root planing light lateral pressure and activate the curette by using vertical, diagonal or horizontal pull strokes.

MESIAL-DISTAL GRACEY

Combining a mesial and a distal working end in one instrument. Useful when treating one quadrant at a time.

All mesial-distal Graceys have code rings that make it easy to identify which working end is mesial and which distal.

EXCHANGEABLE TITANIUM TIPS FOR IMPLANTS

MD CE

LMErgoMix™

A great instrument series for implant maintenance. The LM-ErgoMix™ structure ensures excellent tactile sensitivity and optimal rigidity.

LM-ErgoMix™ hand instrument series offers the dental team a specially economical, ecological and ergonomic alternative. Whenever there is a need for a tip replacement the lock grip is opened, a new tip is inserted and the lock grip is closed again. No extra tools are needed.

Use LM-ErgoMix™ instruments in the normal way, clean and sterilize it like any other instrument. The sealed construction guarantees high level hygiene.

Benefits of retipping:

- Always sharp instruments
- Minimizes waste
- Enables personalized tip combinations.

Titanium tips for sensitive but still effective implant maintenance.

PERIODONTAL INSTRUMENT SETS

MD CE

Powered by

STYLEITALIANO

> **"The LM-PerioKit by Style Italiano contains the essentials for the best possible therapy.**

Instruments have been selected in the spirit of Style Italiano whose philosophy is to make treatment feasible, teachable, repeatable. Periodontal therapy too can follow this approach. It's my feeling that, in the best interest of his patients, every practitioner should be able to properly execute non surgical therapy, crown lengthening procedures, free gingival grafts, simpler surgical root coverages."

Giano Ricci
MD. DDS. MScD.

LM™ INNOVATION

LM Dental Tracking System™

IMPROVING MATERIAL FLOWS AND PATIENT SAFETY

Unique RFID intelligence in dental clinics

What if you could know the exact location and status of every dental instrument and material in your clinic?

LM Dental Tracking System™ is the first commercially available system in dental industry to efficiently track and monitor instruments and materials using an advanced RFID technology.

The unique LM Dental Tracking System™ is created by combining scanning readers, proprietary server software and dental instruments and materials with built-in or retrotagged RFID tags. The system gives the visibility of instruments and materials from storage and maintenance to patient care.

The scanned and documented information improves patient safety, material handling and increases cost efficiency. LM DTS™ offers new possibilities within maintenance and clinical use for dental clinics.

KEY ADVANTAGES

Patient safety
- Safe materials
- Sterilized instruments
- Material traceability

Cost reduction
- Avoid time consuming manual controls
- Decrease stock
- Improve material flow

Asset management
- Ease consumption recording
- Indication of demand
- Improve time management

Documentation & education support
- Reduce risks
- Decrease loss
- Clinical training
- Patient session planning

New intelligence in the dental clinic - know the location of all instruments and materials.

LM-SERVO™ E INSTRUMENT CASSETTES MD CE

In LM-Servo™ E cassettes the instrument handles are clearly visible providing RFID tag readability and identification of individual instruments, though the tips are securely covered with safety shields preventing sharp injuries and protecting the blades.

The LM-Servo™ E cassette series is available with built-in RFID tagging. This option makes E cassettes excellent tool for improving traceability by enabling easy handling and tracking of instruments as sets. Below you find the product codes for RFID tagged cassettes marked with RFID symbol.

The cassettes can be coded with silicone code buttons (LM 6000 - 6005) and attached to the LM-ServoMax™ with a special lock (LM 6417).

SHARPENING MACHINE

LMRondoPlus™

Instruments used in treating hard tissue blunt quickly, naturally compromising efficiency and results. Periodontal instruments should be sharpened regularly.

Interactive demonstration and instruction CD and handy quick guide included!

Easy and quick

- Simple method - the blade is held in the correct sharpening position and the grinding stone rotates
- Sharpening one instrument only takes a few seconds

Versatile

- For both periodontal and preparation instruments
- For both right or left handed
- The direction of rotation can be selected

Accurate and safe

- A dual-position instrument rest. The upper position is for preparation instruments and the lower for periodontal instruments
- The original blade form is preserved
- Low rotational speed - the blade will not heat up nor will its temper be affected

The fine-grain ceramic stone is 400 grit. Finer and coarser sharpening stones are available as spare parts.

LM-RondoPlus™

LM 8600

Package includes:
Sharpening machine, foot pedal, 400 grit sharpening stone, 2 LM-Fingos™, 5 emery tapes, instruction CD and quick guide

On either side of the LM-RondoPlus™ there are LM-Fingo™ test sticks. Sharpness can be tested both with Fingo mounted on the LM-RondoPlus™ or your finger. The Fingo is made of an acrylic plastic and is sized to fit all users.

LM™ INSTRUMENT REPROCESSING RECOMMENDATIONS

To take best care of your premium quality instruments

By following LM™ reprocessing recommendations, you can ensure your instruments to have both long life and high level performance. To take best care of your high-quality instruments pay attention to the recommendations and ensure that only validated procedures are used for cleaning and sterilization. For the hand instrument maintenance use LM-ServoMax™ tray system and LM-Servo™ cassettes in order to protect the instruments and avoid sharp injuries.

LM DTS™ FOR IMPROVED PATIENT SAFETY

With LM Dental Tracking System™ you can increase patient safety with automated evidence-based infection control checks, creating a verifiable human-first approach. LM DTS™ provides possibilities for infection control documentation, automated checks and alerts, material traceability, reprocessing process documentation and records of maintenance and sterilization procedures. For more information go to www.dentaltracking.com or contact your LM™ representative.
