Optimal implant insertion with **LM** Implant Misura MR

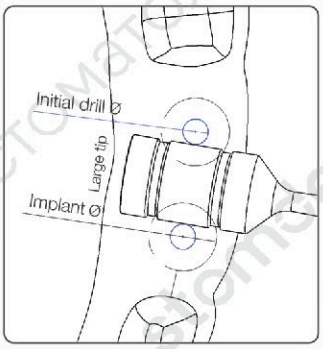

Guiding for correct mesio-distal implant insertion

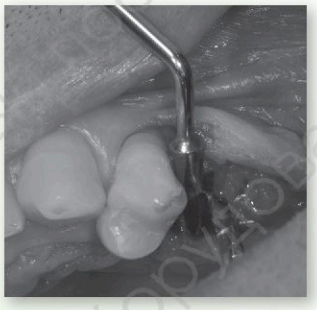

LM Implant Misura MR instruments help positioning the first spiral drill at a correct distance from the pillar i.e. implant or natural element adjacent to the implant and respecting the bone biology.

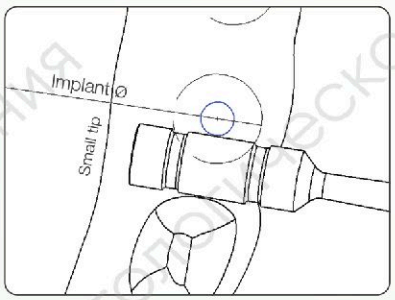

This results in correct amount of bone between the implant and the tooth, so that the bone crest remains stable over time. Once the biology is respected and the case is spaced correctly, a long lasting esthetic result is established.

The instruments are available in different diameters. Each instrument has a larger tip for insertion of adjacent implants and and a smaller tip for spacing an implant from a natural element.

For more details and clinical information about LM Implant Misura MR, please scan the QR and watch the video.

The instruments are designed by Marco Redemagni MD, DDS. Style Italiano is a study group of passionate clinicians and researchers specialized in aesthetic restorative dentistry.

"These instruments are really essential when it comes to positioning the first drill"

Marco Redemagni MD, DDS

Available in different diameters

	LMErgoSense
LM Implant Misura MR 3.0-5.0 Gray	LM 400-401 ES
LM Implant Misura MR 3.1-5.3 Green	LM 402-403 ES
LM Implant Misura MR 3.3-5.6 Yellow	LM 404-405 ES
LM Implant Misura MR 3.4-5.8 Orange	LM 406-407 ES
LM Implant Misura MR 3.7-6.3 Blue	LM 408-409 ES

Choose the right instrument size based on the implant diameter. Scan the QR code for the size table.
