SANAO range

Enter a new era

A complete range that combines an ergonomic and futuristic design: The SANAO handpieces, remarkable through their more compact and leightweight peformance, offer a perfect balance and a unique and flexible handling.

But the innovation does not stop here... The internal filling of cavities with resin removes potential refuges for bacteria that normally contaminate these areas that are inaccessibe for cleaning and disinfection.

SANAO range: healthier, safer, more hygienic...

Futuristic Design

- Its esthetic and ergonomic design prevents hand fatique and carpal stress for better comfort.

Robust Design

- Manufactured entirely from stainless steel and able to withstand repeated sterilization, it retains its original appearance.
  This also guarantees a stronger resistance to desinfectants and chemicals which results in longer life.

Performance

- The geometry in the gear has been optimized for increased durability.

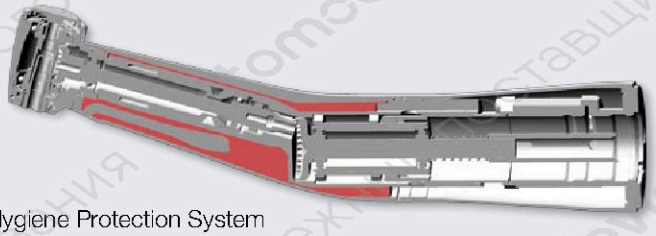

Faultless Reliability

- The high-precision and powerful clamping system provides high reliability and a perfectly centered rotation of burs, reducing noise and vibration.

Bright Lighting and Comfort

- The powerful (glass rod) but not dazzling light guarantees a very targeted lighting on the working area - compatible with LED motors.

HPS - Hygiene Protection System

Control in all forms

The SANAO range is the result of extensive product development, numerous field tests and market research. Squared, pinched, angled and fashioned, the SANAO handpieces were designed to enhance maximum comfort while minimizing hand-fatigue and grip related stress.

A thin profile designed for a more natural and comfortable grip.

The non-circular profile provides a sure grip and an easy orientation of the handpiece in all working positions.

A flat surface on the underbelly of the handpiece provides enhanced stability and precision.

Infection control

Perfect hygiene:
The complement of filling cavity space with resin guarantees improved hygiene.

Deepened and curved zones that are ideally placed along the neck allow a better handling and maximum control of the instrument. This is particularly appreciable while working on areas that are difficult to access.

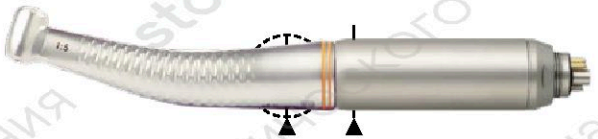

The compact head (13 mm for the blue and green) offers easy access and increased visibility into the operating field.

Balance control

Tension on the hand, wrist-fatigue and the carpal tunnel syndrom might be situations you have previously experienced. These situations can rapidly lead to neck and back pain. By reducing the size of the SANAO handpieces, the center of gravity is placed further to the rear which optimizes ergonomy and reduces stress on the hand/wrist/arm.

Competitor X:
The center of gravity is located in the front, creating tension and pain.

SANAO handpieces:
It is purely physical. With a shorter instrument, the center of gravity has moved. The balance point is perfectly placed in the cavity of the thumb.

- **Ergonomic**
- **Futuristic**
- **Hygienic**
- **Compact**
