3 in 1 system & detachable sensor

Economical, Reasonable Dental X-ray imaging device with combination of Dental CT, Digital Panoramic and Cephalometric.

Adoption Super OLED Sensor

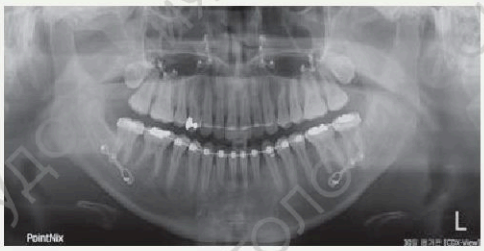

Easily shown clear and high quality image when the luminous body absorbed X-ray, the each cell converts Electronic signal without any spread and overlap.

Excellent rate of X-ray absorption

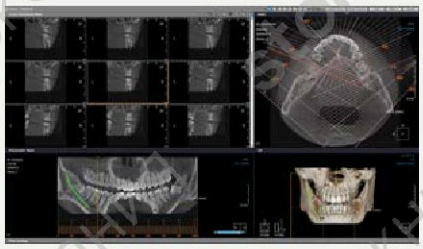

CCD EMOS absorbs 35% of X-ray so it is needed more X-ray. But Super OLED sensor absorbs 100% of X-ray, and it is shown high quality image with low X-ray.

Modern and Simple

Modern and Simple design added with work convenience and inefficient.

PointNix RealScan- Analysis 3D Imaging Software

3D Cube

360° rotated data from one scanning is reconstructed to 3-Dimensional image with the same resolution level.

Oblique Slice

Oblique Slice is to briefly analyze the image of any selected Area

3D Endoscopy

Internal structure of bone, blood vessel, and other areas except for blood vessel are accurately observed through virtual 3D Endoscopy.

3D Implant Simulation

Through the 3D Implant Simulation function, more detailed treatment plan is available, and density of bone structure around implant is measured.

Detachable Sensor Type

The Best Quality of Images

Direct type sensor technology offers clear, accurate and high-defined images which are free from image blurring issues.
Also, due to the highest X-ray absorptiveness, it maximizes the quality of images.

The Greatest Durability

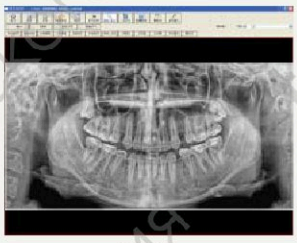

Medium/large size of X-ray tube tank is able to take more than 80 panorama images per day, which offers the World-class durability.

The Most Increased Convenience

Images from Panorama, CT, Intra oral camera, Digital camera, Intra oral sensor and etc can be controlled by one program, CDX View.
